

"Piecing digital evidence together"

Mobile Phone Forensics

Mobile Phone Forensics or Mobile Phone Analysis is the methodical approach to the examination of Mobile Phones and all attached media within. Similar to Computer Forensics, Mobile Phone Forensic Analysis, is now being used in a high number of civil and criminal matters.

This process relies on the integrity and continuity of the data which is maintained through a full auditable trail, and peer approved processes. IntaForensics take advantage of the combined experience of its Analysts to fully examine and report on all Mobile Phone handsets, SIM cards and removable media.

All of IntaForensics work follows strict quality assurance guidelines guaranteeing the highest quality and integrity of all Mobile Phone Forensic Analysis work carried out. A wide variety of data can be retrieved during a Forensic Analysis of a Mobile Phone including, but not limited to call registers, text messages and multimedia messages.

- **Automatic Analysis**

This form of Analysis is used when the Mobile Phone is supported by one or more Forensic software applications. A manual verification is then performed to confirm the extracted data is complete and correct.

- **Manual Analysis**

This form of Mobile Phone Analysis is used when the Mobile Phone is not supported by any Forensic software, or the support offered is limited to such a degree that very little data is capable of being extracted.

- **Fixed Costs**
- **Recovery of Deleted Data**
- **Guaranteed Service Levels**
- **Court Ready Reports**
- **BS EN ISO 9001:2000 Accredited**
